Computer Science Project Weekly Progress Report

Surname	Kalegana Koralege
Given Names	Pawani Gayasha
Student ID	23246269
Master/Major	Master of Computing Majoring in AI
Supervisor	Associate Professor Sajib Mistry
Project Title	AI-Powered Deepfake Detection & Media Integrity System (TBD)
Group Number	2
Reporting Week	**Week1 From 20/02/2026 To 26/02/2026**

What is your own assessment of your progress this week?

Excellent	Good	Fair	Poor	No Progress
√				

Breakdown of the time spent on the project for this reporting week (add more rows if needed). If you are part of a team, be specific to what you actually did.

Activity	**Number of hours (indicative)**
Setting up and initialising Jira for project task management, and Clockify for time tracking and learning about Bitbucket	0.75
Team meetings to discuss project management workflow (Jira and Clockify usage) and to deliberate on potential project topics for the semester	1.75
Research into potential project topics	2
Report Preparation	1
TOTAL	5.5(hours)

Note that as per the unit outline, you are expected to spend at least 8 quality hours per week on this project unit, very much like any 25-credit unit you are studying.

Highlights of the achievements made this week:

- Successfully set up Jira and Clockify as the team's project management and time tracking tool and gained hands-on familiarity with their key features and configuration options.
- Gained an understanding of Bitbucket as a version control platform and how it integrates with Jira to link code commits and branches directly to project tasks.
- Participated in productive team meetings to discuss project management processes and researched into narrowing down a suitable project topic.

Further details to report to your supervisor, please include any concerns you may have:

Access to computational resources. Training deep learning models for media analysis and deepfake detection typically requires significant processing power, particularly GPU resources. Does the university provide access to any computing infrastructure, cloud credits, or relevant licensed datasets that we could utilise for this project?
